What does BIBM do for precast concrete companies in Europe?

BIBM creates a favourable macroeconomic framework for the precast concrete industry

By promoting the positive impacts of Small- and Medium-sized enterprises, the multiplying effect of the investment in the construction sector and the need for a manufacturing sector in Europe, BIBM creates a favourable framework for the development of the precast concrete business at the macroeconomic level.

BIBM reduces the regulatory burden on the precast concrete sector

Long-term vision, stability and predictability are BIBM's key principles when influencing European regulations. BIBM is very active in achieving business friendly standards, both for concrete products and for horizontal issues (design, sustainability etc...). Active contact with policy makers and preparation of common industry studies are the main tools to reduce the regulatory burden.

BIBM increases competitiveness with respect to alternative solutions

BIBM aims at the establishment of precast concrete favourable regulation and standards. The presence of BIBM ensures a balance to the action of competitive construction solutions. Thanks to its supranational structure, BIBM is able to coordinate common projects (Holcofire, Safecladding) which directly increase precast concrete's competitiveness versus competitive solutions.

How does BIBM achieve these goals?

BIBM represents the communication channel between the precast concrete industry and European policy makers

BIBM organises a business friendly and balanced standardisation environment

BIBM encourages and coordinates common actions in the field of research and promotion

BIBM promotes the sustainability of precast solutions in the European legislative and standardisation environments

BIBM maintains a network of people in the precast, concrete and construction fields

BIBM openly communicates, both internally (members) and externally (stakeholders)
